ENEL GREEN POWER BEGINS CONSTRUCTION ON NEW WIND FARM IN ITALY

- *With an installed capacity of 8 MW, the Barile Venosa wind farm, located in the province of Potenza, will be capable of generating over 22 GWh once fully up and running*

Rome, February 20th, 2015 – Enel Green Power has begun construction on a new wind farm, in the municipalities of Barile and Venosa, near Potenza, in the region of Basilicata.

With a total installed capacity of 8 MW, the Barile Venosa plant will be able to generate more than 22 GWh per year once fully up and running, equivalent to the energy needs of around 1,800 Italian households and thereby avoiding the emission of nearly 9,000 tonnes of CO₂ into the atmosphere each year.

EGP will be investing a total of more than 11 million euros to construct the Barile Venosa plant.

The plant will be built close to the existing Potenza-Pietragalla wind farm, already operating since 2012. Potenza-Pietragalla has an installed capacity of 18 MW and is capable of producing more than 39 million KWh each year.

The Barile Venosa plant will benefit from an incentivized tariff over the next 20 years. EGP was awarded the tariff through its participation in the dedicated tender held in 2014.

***Enel Green Power** is the Enel Group company fully dedicated to the development and management of renewable energy sources at the international level, with operations in Europe, the Americas and Africa. With an annual generation capacity equal to, approximately, 32 billion kWh from water, sun, wind and the Earth's heat - enough to meet the energy needs of more than 10 million households, Enel Green Power is a world leader in the sector thanks to its well-balanced generation mix, providing generation volumes well over the sector average. As of today, the company has an installed capacity of approximately 9,600 MW from a mix of sources including wind, solar, hydroelectric, geothermal and biomass. The company has about 740 plants operating in 15 countries.*
