ENEL GREEN POWER BEGINS CONSTRUCTION OF SIERRA GORDA WIND FARM IN CHILE

- *The 112 MW power plant will be able to produce over 295 GWh each year once fully operational*
- *Enel Green Power will invest approximately 215 million US dollars in the construction of Sierra Gorda*

Rome, December 22nd, 2015 – Enel Green Power (“EGP”) has started building its 112 MW Sierra Gorda wind farm, named after the town where it is located, which is approximately 60 kilometres from the city of Calama in the Chilean region of Antofagasta.

Sierra Gorda is owned by Enel Green Power Chile Ltda. and is expected to be completed and enter into service by the end of 2016. Once fully operational, the facility will generate more than 295 GWh each year – equivalent to the annual power consumption needs of around 130,000 Chilean households – while avoiding the emission of over 140,000 tonnes of CO₂.

EGP will invest approximately 215 million US dollars in the construction of the new facility, in line with the growth targets set out in the company’s current business plan. The project will be financed through the Enel Green Power Group’s own resources and will be supported by a long-term power purchase agreement (PPA).

The energy generated by the Sierra Gorda wind farm will be delivered to the transmission network Chile’s northern region, SING (Sistema Interconectado del Norte Grande).

EGP currently operates a portfolio of plants in Chile that have a combined installed capacity of around 600 MW, of which 340 MW comes from wind power, 154 MW from PV solar and 92 MW from hydropower. In addition, Enel Green Power currently has close to 600 MW of projects in execution which, when completed, will bring the company’s total installed capacity in Chile to about 1,200 MW. Among these projects, EGP is building Cerro Pabellón, South America’s first geothermal plant that has a gross installed capacity of 48 MW, in partnership with ENAP.

***Enel Green Power** is the Enel Group Company fully dedicated to the international development and management of renewable energy sources, with operations in Europe, the Americas, Africa and Asia. With a generation capacity that corresponds to approximately 32 billion kWh in 2014 from water, sun, wind and the Earth’s heat – enough to meet the energy needs of more than 11 million households – Enel Green Power is a world leader in the sector thanks to its well-balanced generation mix that provides generation volumes well over the sector average. The company has an installed capacity of more than 10,000 MW from a mix of sources including wind, solar, hydropower, geothermal and biomass. The company has about 740 plants operating in 16 countries.*
