ENEL X AND FCA SIGN PARTNERSHIP AGREEMENT TO BOOST E-MOBILITY

- *Enel X will provide intelligent charging solutions to FCA's plants, offices and R&D centers, with 700 stations due to be installed in Italy over the next two years, as well as to FCA's dealerships in Italy, Spain and Portugal, including customer parking, test-drive and service areas*
- *As of 2020, FCA's EV customers in Italy, Spain and Portugal will be offered the option to install Enel X JuiceBox charging stations, alongside a range of charging services and solutions*
- *The two parties also aim to jointly design and test new e-mobility services and product upgrades, leveraging on Enel X charging assets installed at FCA premises and its e-mobility management platform*

Rome, June 14th, 2019 – Enel X, the Enel Group's business line dedicated to advanced energy services and products, and multinational automaker Fiat Chrysler Automobiles (FCA) signed a partnership agreement to develop new e-mobility solutions to boost the uptake of electric vehicles (EVs) and support FCA's soon-to-be-launched electrified vehicle models. Under the agreement, Enel X will equip FCA facilities and dealerships in Italy, Spain and Portugal with its charging infrastructure and will offer FCA's EV customers with tailored charging solutions and services. In addition, the two parties have agreed to establish an innovation committee to develop and test new e-mobility solutions and services.

*"Partnerships like this one, bringing together the energy utility sector and the car manufacturing industry, are of paramount importance to boost electric mobility which is a key driver in the energy transition," said **Francesco Venturini**, Head of Enel X. "We are committed to pooling our global experience in advanced energy services with FCA's renowned expertise in car manufacturing to develop new solutions and business models pushing innovation in e-mobility. This partnership perfectly fits within Enel X's strategy which includes plans for the deployment of public charging networks in Italy, Spain and Romania and several partnerships with public administrations and private players to accelerate the e-mobility revolution."*

A full range of Enel X smart charging solutions, including stations and charging management software, will be provided to FCA's plants, offices and R&D centers. In particular, FCA plans to install approximately 700 Enel X charging stations over the next two years at its premises in Italy. Enel X charging solutions will also be installed at FCA's dealerships in Italy, Spain and Portugal, including customer parking, test-drive and service areas. In addition, Enel X and FCA will provide dedicated e-mobility training programmes to the sales force and other personnel at FCA's dealerships.

Starting from 2020, FCA's EV customers in Italy, Spain and Portugal will be given the option of installing an Enel X charging point ("JuiceBox") tailored to their specific requirements, including a range of charging services, and alternatively solutions for charging on the public network. Enel X will support FCA customers with the preliminary feasibility assessment and installation of the JuiceBox, as well as providing ongoing management and maintenance throughout the life of the vehicle and the charging

point. Enel X and FCA will also work together to provide customers with a user-friendly app solution for charging management.

To strengthen their partnership and accelerate innovation in e-mobility, Enel X and FCA will launch an innovative charging programme by establishing an innovation committee aimed at jointly designing, experimenting and testing new services and product upgrades for the different markets of reference, leveraging on the charging assets installed at FCA premises managed through the Enel X e-mobility management platform.

Enel X is Enel's business line dedicated to the development of innovative products and digital solutions in sectors where energy shows the greatest potential for transformation: homes, businesses, cities and electric mobility. The company is a global leader in the demand response sector and has a demand management capacity of over 6 GW at the global level, with presence in North America, Europe, Asia and Oceania.
